

## Experiment 4

**Student Name:** Sakshi Chib

**Branch:** BE CSE

**Semester:** 6<sup>th</sup>

**Subject Name:** Full Stack Development

**UID:** 23BCS11642

**Section/Group:** KRG 3A

**Date of Performance:** 03/02/26

**Subject Code:** 23CSH-309

### Aim:

To optimize the performance of the EcoTrack React application using memoization techniques and code splitting, and to enhance the user interface using enterprise-grade Material UI components.

### Objective:

After completing this experiment, the student will be able to:

- Understand the causes of unnecessary re-renders in React applications
- Optimize React components using `React.memo` to prevent avoidable re-renders
- Apply `useMemo` to efficiently compute derived data and avoid redundant calculations
- Use `useCallback` to memoize event handler functions and improve component performance
- Implement lazy loading of components and routes using `React.lazy` and `Suspense`
- Reduce initial bundle size and improve application load performance through code splitting
- Enhance the visual appearance and usability of the EcoTrack application using Material UI components
- Design a clean, consistent, and responsive user interface using Material UI layouts and typography

### Implementation/Code:

#### Login.jsx:

```
import { useAuth } from "../context/AuthContext";
import { useNavigate } from "react-router-dom";
import Button from '@mui/material/Button';
import Box from '@mui/material/Box';
import Typography from '@mui/material/Typography';

const Login = () => {
  const { login } = useAuth();
  const navigate = useNavigate();
```

```
const handleLogin = () => {
  login();
  navigate("/dashboard");
};

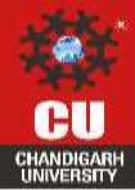

return (
  <Box sx={{{
    display: 'flex',
    flexDirection: 'column',
    alignItems: 'center',
    justifyContent: 'center',
    minHeight: '100vh',
    p: 3
  }}>
    <Typography variant="h4" gutterBottom>
      Welcome to EcoTrack
    </Typography>
    <Button
      variant="contained"
      color="primary"
      size="large"
      onClick={handleLogin}
      sx={{ mt: 3, px: 6, py: 1.5 }}
    >
      Login to EcoTrack
    </Button>
  </Box>
);
};

export default Login;
```

### Dashboard.jsx:

```
import { useState } from 'react';
import { Outlet, useNavigate, Link as RouterLink } from 'react-router-dom';
import { useAuth } from "../context/AuthContext";
import Header from "../components/Header";

import AppBar from '@mui/material/AppBar';
import Box from '@mui/material/Box';
import Toolbar from '@mui/material/Toolbar';
import Typography from '@mui/material/Typography';
```

# CHANDIGARH UNIVERSITY

Discover. Learn. Empower.

```
import Drawer from '@mui/material/Drawer';
import List from '@mui/material/List';
import ListItem from '@mui/material/ListItem';
import ListItemButton from '@mui/material/ListItemButton';
import ListItemIcon from '@mui/material/ListItemIcon';
importListItemText from '@mui/material/ListItemText';
import Divider from '@mui/material/Divider';
import IconButton from '@mui/material/IconButton';
import Button from '@mui/material/Button';

import HomeIcon from '@mui/icons-material/Home';
import DashboardIcon from '@mui/icons-material/Dashboard';
import AssessmentIcon from '@mui/icons-material/Assessment';
import LogoutIcon from '@mui/icons-material/Logout';
import MenuIcon from '@mui/icons-material/Menu';

const drawerWidth = 240;

const Dashboard = () => {
  const { logout } = useAuth();
  const navigate = useNavigate();
  const [mobileOpen, setMobileOpen] = useState(false);

  const handleLogout = () => {
    logout();
    navigate("/login");
  };

  const handleDrawerToggle = () => {
    setMobileOpen(!mobileOpen);
  };

  const drawerContent = (
    <div>
      <Toolbar /> {/* spacer under AppBar */}
      <Divider />
      <List>
        <ListItem disablePadding>
          <ListItemButton
            component={RouterLink}
            to=""
            onClick={() => setMobileOpen(false)}
          >
```

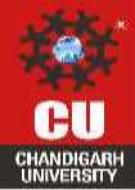

```
<ListItemIcon><HomeIcon /></ListItemIcon>
<ListItemText primary="Home" />
</ListItemButton>
</ListItem>

        <AuthProvider>
          <App />
        </AuthProvider>
      </BrowserRouter>
    </ThemeProvider>
  </Provider>
</React.StrictMode>
);
```

## Output:

### Dashboard

- [Home](#)
- [Overview](#)
- [Reports](#)
- [Logout](#)

#### Total Activities

- Car Travel: 4 Kg
- Electricity Usage: 6 Kg
- Cycling: 0 Kg

#### High Carbon (> 4 Kg)

- Electricity Usage

#### Low Carbon ( $\leq$ 4 Kg)

- Car Travel
- Cycling

[Refresh Logs](#)

## Overview Page

This is the Overview section of EcoTrack.

## Reports & Analytics

Detailed reports and carbon footprint analysis coming soon...

### Learning Outcome:

1. Identify and analyze causes of unnecessary re-renders in a React application.
2. Apply React.memo, useMemo, and useCallback to optimize component rendering performance.
3. Implement code splitting and lazy loading using React.lazy and Suspense to improve load time.
4. Design a responsive and consistent UI using Material UI components and theming.
5. Integrate performance optimization techniques with secure routing and modern React architecture.
